Strikes in Red Top and Other Mines -Stock Exchange Business.

NEVADA LIVELY

NEWS OF LOON

GOLD AND SILVER PRODUCTION FOR 1904.

(Special to The Herald.) Goldfield, Nev., Nov. 19.-A strike was reported last week on January Jones' lease on the Silver Pick, a property west or higher. of the Mohawk, January and Combination, and not far from the Red Top. Jones has but recently acquired an interest in the ground and he begun to sink a shaft. At a depth of nine feet a in was encountered several feet in

sink a shaft. At a depth of nine feet a vein was encountered several feet in width carrying shipping values, and it is claimed that a two-foot streak assayed \$171. The Silver Pick company has been working on this property for some time, but had falled to locate a pay streak. A month ago Paul Measmer acquired this lease, and January Jones, through his least of the lease, and January Jones, through his leasting corporation, acquired a considerable interest with him. Sol Camp and exchange upon receipt of the news, Mohawk adjoins the Silver Pick, and this stock has also been in demand. Their shaft is down 250 feet, but little crosscutting has been done.

Stock Exchange Business.

There is a steady increase of sales on the new mining stock exchange, and the board rooms take on the appearance of a miniature Wall street. Enough noise and excitement issues from in under Cook's bank to convince the most skeptical that the public is speculation mad. An average of 75,000 shares per day has changed hands for the past two weeks. With few exceptions prices have advanced, while in one or two instances prices have doubled. An interesting feature to a large number of investors distributed over the country is in connection with the sales of Tokop Gold Mining company stock on the public is speculation mad. An average of 75,000 shares per day has changed thands for the past two weeks. With few exceptions prices have advanced, while in one or two instances prices have doubled. An interesting feature to a large number of investors distributed over the country is in connection with the sales of Tokop Gold Mining company stock on the provided in the troubles between that company and L. Bleakmore company. It is hoped now that the company will be placed on a firm promotion basis. There is no end to the wonders being uncovered in the Red Top. Harry Taylor, in charge of this mine and also the Jumbo, estimated today that the 7,000 sacks of ore stacked on the distributed by the company will be placed on a firm promotion basis. There is no e Charles Taylor 4s in Salt Lake City trying to make some arrangements with
smelters there. It is not thought probable that he will succeed in this, and in
event of his failure arrangements will
doubtless be made with the new American
mill in Goldfield. It is claimed that the
mill can extract 99 per cent of the values
without any trouble, Eventually the
Taylors propose to erect their own mill.

ter—Golden Reef Improving.

Special to The Herald.)

Special to The Herald.)

Richfield, Nov. 18.—Superintendent J. H. Nelson of the Signal Feak, one of the most promising properties on Gold Mountain, the winter the mill an extract 59 per cent of the values without any trouble. Eventually the most promising properties on Gold Mountain, the Taylors propose to erect their own mill.

Water in Red Top.

The Red Top is down 189 feet. At this depth 30,900 gallons of water was struck, and the problem of taking care of it still contribute the management. The mine contains untoid quantities of ore running from 310 to \$30 per ton, and none of this class has been touched except what was necessary in the course of drifting. About 180 feet wide and two feet of it carried the high values, some running \$6,000 to the ton, though assays were obtained as high as \$30,000. The vein runs northwest and southeast and is plainly traceable to the Jumbo ground across the way. It has been found again on the 150 level,

Mr. Taylor states that the Jumbo slart Is now down 440 feet and is about as low as they are going with it at the present time. They expect to make a shiper out of the Jumbo without much further effort. The Red Top is millious for the property in company with H. N. Hayes, J. A. Ross, Though as subject to the first one of the subject of the Jumbo without much further effort. The Red Top is millious for the property in company with H. N. Hayes, J. A. Ross, The Red Top is millious for the first one of the company with H. N. Hayes, J. A. Ross, They expect to make a shipper out of the Jumbo without much further effort. The Red Top is millioned to the britering of the first line. They expect to make a shipper out of the Jumbo without much further effort. The Red Top is millioned to the property in company with H. N. Hayes, J. A. Ross, Though the property in the proper amount of stock a company should place in its treasury to be sold for development purposes, that the Red Top is millioned to the property in company will be the cur the proper amount of stock a company should place in its treasury to be sold for development purposes, that the Red Top had originally 400,000 treasury stock, and it was placed on the market at 15 cents to the public and II cents to brokers. Only 240,000 shares were sold for this purpose and the remaining 120,000 shares are

Red Top stock is now selling around a New Sampler for Goldfield.

New Sampler for Goldfield.

The Western Ore Purchasing company is to enter Goldfield with an up-to-date sampler. There is room for it. The most important thing to Goldfield just now is to be provided with samplers, mills and to be given smelter facilities. It seems remarkable that all this high-grade ore should be allowed to remain sacked on the dumps, and that some of it should even be stored in bank vaults as it has been. In the first place the rallroad rates are extortionate. Secondly, the smelters are not anxious for Goldfield silicious ores and they therefore demand a high price forhandling. The mine owners, who in many cases are amply able to pay the excessive rates, are not willing to do so. If ore can profitably be handled at a cost of from \$12\$ to \$25\$ per ton, they fail to see ore can profitably be handled at a cost of from \$12 to \$25 per ton, they fail to see any sense in paying \$100 per ton. For be it known that one mine has been quoted a price of 10 per cent for handling ore which the mine owners claim runs \$4.000 per ton. These troubles are bound to be adjusted soon, and the sooner the better.

AFTER METEORIC IRON.

Standard Iron Co. of New York Expects Big Returns From Scheme.

A unique mining undertaking is now promises of success. The Standard Iron company of New York is sinking a shaft six miles south of Diablo station, on the Santa Fe railroad, close to Diablo canvon, for the purpose of uncovering and smeiting a gigantic meteorite which struck the earth in that section many years ago, probably in the prehistoric period. A unique mining undertaking is now

years ago, probably in the prehistoric period.

They know the location of the meteorite because it knocked a hole in the earth three-quarters by half a mile and 600 feet deep, and fragments of the thing are scattered all over the surrounding country. The tragments have been analyzed and are found to be almost pure iron, running high in lead, silver and gold. Many pieces as large as a box car have been found and the returns at the smelter have been very high.

The Standard Iron company began working to locate the meteorite about a period and a shalf from the bottom of the great hole which it knocked in the country of the earth has already been surk to a depth of 400 feet, making a lotal of 1,000 feet the company has gone into the earth. Fragments of the meteorite have already been found in the shaft, and it is expected that the meteor proper

it is expected that the meteor proper

and it is expected that the meteor proper will soon be reached.

From the richness of the fragments on the surface and the size of the hole which the meteorite knocked in the earth, the promoters of the undertaking to "mine" it estimate that it is worth \$12,000,000.

From the pieces of the meteorite found on the surface the prospectors have realized a goodly sum in the days gone by. At one time, according to W. H. Clark, a responsible citizen of Holbrook, Ariz., the Indians made a good living bringing these fragments in to the traders of his town, who paid them \$1 a pound for every bit they brought. Even at this price and in the days when there were no railroads, they made money out of the transaction.

The country is barren and unsettled in this region and miners have never at \$1.

IN LOON CREEK COUNTRY.

Mt. Estes Tunnel Enterprise-Lost Packer Smelter.

The Mt. Estes Development company has the main working tunnel in about 900 feet, and is nearing the point where the first ore vein is expected to be cut, says the Challis Messenger. There are many different gold-bearing ledges on Mt. Estes, on both northeast and southwest sides, that the tunnel will strike at great depth, some of which show good ore and others were warked to the water and were shippers of rich ores in the past, J. Czizek is the manager of this enter-

prise, and thus far his general good judgment has not failed. He was the promoter and until recently manager of the Lost Packer incorporation, which he developed from a prospect to one of the greatest mines in the country.

Mr. Czizek is progressive and believes that if a mine is worth developing it is worth putting a wagon read to it. Through his counsel the Lost Packer company built the wagon road from Jordan creek to Loon creek and to the Packer, thereby connecting the Yankee Fork country with the Loon creek country, which has been of much benefit to the whole country. He also built a good wagon road from Jordan creek onto Mt. Estes at considerable expense, over which the heavy machinery and supplies for the tunnel work were taken.

The Lost Packer matting plant is pearing completion and will be put in operation yet this fall. There is much rich ore on the dumps, taken out during the course of development, with great quantities in sight in the tunnels and raises, to be extracted as required, and fine showings of rich ores at all points where development has been carried.

It is understoood that the Lost Packer ore averages in gold about five ounces per ton, a few ounces silver and 29 to 35 per cent copper. According to this (which is probably very nearly the average, the matte will be worth \$600 to \$700 per ton or higher.

CREDITED WITH GOOD WORK.

Salt Laker Builds Fine Mill for West ern Ore Purchasing Co.

(Special to The Herald.)

, and the remaining 160,000 shares are in the treasury and are not for sale.

mous output?

Richfield Reaper: J. H. Snyder, a practical mining man, who spent last summer and fell on the Neyada deserts, was in Richfield this week outfitting for a trip to the Henry mountains, where he proposes spending the winter doing development work on some mining claims in which he is interested. Mr. Snyder thinks that the Henry mountains district will yet come to the front, past experiences and disappointments to the contrary. He has sufficient confidence in the district to announce that he will resume work in a 300-foot funnel on one of his properties, and he is just optimistic enough to believe that before next spring he will encounter values that will cause renewed interest in the Henrys.

PRODUCTION OF GOLD AND SILVER

Geological Survey Issues Report on Output During 1904.

AND MONTANA SHOW DECREASE.

The production of gold in the United States during 1904 amounted to 3,910,729 fine ounces, valued at \$50,835,648. This represents an increase of \$7,243,948 over he production of 1903. After a period of 'ery rapid advance in the gold production from 1892 to 1900, during which an increase from 833,600,600 to \$79,171,600 took place, there followed two years of nearly stationary output and one year, 1903, of very decided decrease. It is therefore very gratifying to find that the production has risen again with a bound to record figures, the largest previous output in 1902, amounting to \$80,000,000.

The Production of Silver.

The production of silver in 1904 amount to 55,999.864 fine ounces, valued at

Sources of Increase in Production.

Sources of Increase in Production.

The principal sources of the great increase in the gold production of over \$8.000.000, compared with that of 1903, are easily traceable. Colorado added nearly \$2.000.000 to her production of -1903, most of this amount coming from the mines of Cripple Creek. Nevada's output increased about the same amount, chiefly by reason of the phenomenal yields of the Goldfield mines. The greatest progress is reported in California, whose production exceeds that of 1903 by \$2,300,000, the increase being caused partly by a strong development of the quartz mining industry and to a less degree by the activity of the dredgers. Alaska and Arizona show increased yields, amounting, respectively, to \$45,832 and \$748,703. A numbe rof states shew smaller increase, while Utah, Montana and Washington have less gold to their credit in 1904 than in 1903.

The increase of value in the production of silver of \$73,278 is somewhat evenly

1994 than in 1903.

The increase of value in the production of silver of \$2.713.378 is somewhat evenly distributed among the various states and territories, but is to some extent due to the better price of silver obtained. Colorado leads with an increase of \$70.320. California, Idaho, Montana, Nevada and Utah also added considerable value to their silver production.

cut into ore at any shot. The formation is showing a mineralized stain and the last day's work showed the best rock yet out since passing the first vein several hundred feet back.

New Mining Company.

(Special to The Herald.)

Provo, Nov. 18.—Articles of incorporation of the Box Elder Mining company have been filed with the county clerk. Alpine City, Utah county, is named as the principal place of husiness. The capital stock is \$160,000. divided into shares of the par value of 50 cents each, based on the valuation of the following mining claims, situated in Alpine mining district and owned by the company. Last Chance and Last Chance Extension Nos. 1, 2 and 12. The officers and directors are: Frank D. Strong, president; Joseph Moyle, vice president; J. M. Jensen, secretary and treasurer; Joseph Moyle, vice president; J. M. Jensen, secretary and treasurer; Joseph T. Bateman, assistant secretary and treasurer; Joseph Moyle, vice president; J. M. Jensen, secretary and treasurer; Joseph Moyle, vice president; J. M. Jensen, secretary and treasurer; Joseph Moyle, vice president; Joseph M

Nevada's Big Increase.

Nevada is one of the states of large increase. The production of gold reached \$5,000,49t in 1904, an increase over the preceding year of \$1,990,14t. Practically the whole of this increase should be credited to the new camp of Goldfield, which produced over \$2,300,000 during the year. The returns from silver produceds indicate an increase of \$335,918, of which the greater part is derived from the Comstock mines. Tonopah remains very productive, with an output of about \$1,230,000 of silver, commercial value.

stock mines. Tonopah remains very productive, with an output of about \$1,220,600 of silver, commercial value.

In New Mexico the gold production of the year was \$281,930, an increase of \$112,-307 over 1993, which is derived largely from the Rosedale district, in Socorro county, and the Hillsboro district, in Sierra county. Small decreases are reported from other counties. The placers yielded \$149,424. A small increase, mostly from Socorro county, is noted in the unimportant silver production.

Oregon shows a stationary gold production of \$1,412,186, of which about one-third is derived from the southern part of the state and the remainder from the Blue mountains, in the northeastern part of the state, Baker county, in which the important Cracker Creek mining district, near Sumpter, is located, led in production, with \$738,973, of which \$51,855 was derived from placers. The silver output of Oregon is unimportant and principally derived from placers. The silver output of Oregon is unimportant and principally derived from Baker and Grant counties.

South Dakota produced within a small territory in the Black Hills gold to the value of \$7,363,977, an increase of more than \$500,000 over the output of J053. This industry is based on the mining on a large scale of low-grade amalgamating ores of the Homestake type and of siliceous ores of higher grade which are reduced by cyaniding or smeltins.

The silver production of Texas, estimated for 1904 at 285,576 fine ounces, is to a large extent derived from the mines of the Presidio Mining company at Shaffer. a large extent derived from the mines of the Presidio Mining company at Shafter, Presidio county. The ores carry silver thloride and are reduced by an amalga-

Utah's Record.

In Utah the gold product decreased \$154,777 in value, and amounted to \$4,185,-292. A decrease of about 20,000 ounces in Tooele county, in which is situated the Camp Floyd district of cyaniding ores, is largely responsible for this, but the decrease is to a large extent counterbalanced by the increased output of \$341 Lake and Juab counties, in which are situated the Bingham and Tintic camps. The growth of the Bingham camp is especially remarkable. The silver production of Utah shows a loss of 154,565 ounces, but on account of higher prices paid for the metal the value increased \$380,146. The state produced a total of 12,684,446 ounces, being third in rank after Colorado and Montana. The decrease is due to smaller shipments from the Park City mining district. A large increase of silver is reported, however, from the Tintic district and from Bingham.

The state of Washington produced less

NEVADA MAKES BIG JUMP

gold than in 1905, the decrease amounting to \$183,422, with a total production of \$314,433. This is explained by the idleness of several large mines in Ferry, Chelan and Okanogan counties. In Ferry county the decrease seems due largely to the difficulty of treating the ores, which do not yield readily to amalgamation or cyaniding, while their siliceous character makes them undesirable for the smelters. That the state did not show a still greater loss is due to the Mount Baker district, which increased its yield from \$36,338 in 1993 to \$115,000 in 1904. The output of silver in Washington is small and is derived mainly from the lead ores of Stevens county, but in part from the siliceous ores of Whatcom and Ferry counties.

Wyoming is one of the least important states in the production of gold and silver, having produced only \$17,305 in gold and \$2,661 in silver during 1904.

The southern Appalachian states, including Maryland, Virginia, North Carolina, South Carolina, Georgia, Alabama and Tennessee, produced gold in 1994 to the value of \$45,083. This production is extremely scattered, considering its small amount, Virginia contributed from eleven counties, North Carolina from thirty-two, South Carolina from twelve and Georgia from twenty-six counties. The output has remained approximately stationary for many years. Dumpkin county, in Georgia, containing the Dahlonega district, Montgomery and Stanley counties, in North Carolina, where the Haile mine is situated, are the only ones among the many producing counties in which the output of gold exceeded \$10,000.

Number of Mines.

Number of Mines.

The number of producing mines in the western states, exclusive of Alaska, in 1994, was 3,254. To this should be added several hundred producers in Alaska and probably over 100 in the soutifiern Appalachian states, which would make a total of about 4,000. The total number of placer mines reported is 1,349 and of deep mines 1,565. Colorado has the largest number (567) of deep producing mines, and is followed by California, with 474. In number of placer mines California easily leads, with 711, and is followed by Idaho with 263, and by Oregon with 211 mines. California has by far the greater number, 1,185. of producing mines, and is followed by Colorado, in which the number is 588.

Classification of Ores.

One of the most important features of Mr. Lindgren's report is his elassification of the gold and silver product according to its derivation from placers, dry or siliceous ore, lead ores, copper ores and zincand zinc-lead ores. It is impossible to give an adequate idea in a brief notice of this report, of its wide scope and careful detail. It is published, however, as an extract of the survey's forthcoming volume "Mineral Resources of the United States, 1904." and copies may be obtained free of charge on application to the director of the United States geological survey. An Ordinance.

AN ORDINANCE LEVYING A TAX AN ORDINANCE LEVYING A TAX and for the assessment of property on the west side of Tenth East street between Fourth South and Fifth South streets, in sidewalk district No. 22, for the construction of a cement sidewalk. Be it ordained by the city council of Salt Lake City, Utah:

Section 1. That the city council does hereby levy the tax and provide for the assessment of the same upon the property hereinafter described in lots Nos. I and 8, block 29, plat "B." Sait Lake City survey, abutting on the west side of Tenth East street between Fourth South and Fifth South streets, in sidewalk district No. 22, said property having a frontage of 660 feet along said street.

This tax is levied to defray the experiments

South and Fifth South streets, in sidewalk district No. 22, said property having a frontage of 660 feet along said
street.

This tax is levied to defray the expense of constructing a cement sidewalk
six feet wide and four inches thick upon
said portion of said street opposite the
property hereinafter described to be
especially affected and benefited by said
improvement, and it is hereby adjudged,
determined and established that the same
will be especially benefited thereby to
the full amount of the tax hereby levied, and said parcels of land are hereby assessed at an equal and uniform
rate in accordance with the linear foot
frontage upon said portion of said street
fronting upon and to a depth of twentyfive (25) feet back therefrom, and the
tax hereby levied and to be assessed
upon said parcels of land is six hundred and sixty (\$60.00) dollars, or one
(\$1.00) dollar per front or linear foot,
which is the estimated total cost and
estimated cost per linear foot of said
sidewalk, and the treasurer is hereby
authorized and directed to assess in accordance with the provisions of this ordinance for the purpose herein mentioned,
all of lots 1 and 8, block 29, plat "B."
Salt Lake City survey, as the same are
shown upon the official plats of said
city to a depth of twenty-five (25) feet
back from said street, and to collect
said tax.

Sec. 2. Said tax shall become and be
delinquent in six equal installments, as
follows, to-wit: One-sixth thereof shall
become and be delinquent one month
after the approval of this ordinance; onesixth thereof in one year after such
approval; one-sixth thereof in five
years after such approval; onesixth thereof in four years after such
approval, and one-sixth thereof in five
years after such approval. Each and
every installment of said tax shall bear interest at the rate of eight per cent
per annum from date of
levy until delinquent, and each and every
installment of said tax shall bear interest at the rate of eight per cent
per annum from and after its date of
del

nquency. c. 3. This ordinance shall take effect

Sec. 3. This crumants upon approval.

Passed by the city council of Salt Lake City, Utah, October 30th, 1905, and referred to the mayor for his approval.

J. S. CRITCHLOW, City Recorder.

Approved this 2d day of November, 1905.

RICHARD P. MORRIS, Mayor,

State of Utah, City and County of Satt Lake.—88.

I. J. S. Critchlow, city recorder of Salt Lake City, Utah, do hereby certify that the above and foregoing is a full, true and correct copy of an ordinance entitled, "An ordinance levying a tax and for the assessment of property on the west side of Tenth East street between Fourth South and Fifth South streets, in sidewalk district No. 22, for the construction of a cement sidewalk," passed by the city council of Salt Lake City, Utah, October 30th, 1905, and approved by the mayor, November 2d, 1905, as appears of record in my office.

In witness whereof, I have hereunto set my hand and affixed the (Seal.) corporate seal of sald city, this 3d day of November, 1905.

J. S. CRITCHLOW, City Recorder.
